

Stochastic processes on surfaces in 3D contact sub-Riemannian manifolds

Talk by Karen Habermann on joint work with
Davide Barilari, Ugo Boscain and Daniele Cannarsa

arXiv:2004.13700

(to appear in *Annales de l'Institut Henri Poincaré, Probabilités et Statistiques*)

15th International Young Researchers Workshop on Geometry,
Mechanics, and Control

Setting

Setting

- ▶ M three-dimensional smooth manifold,

Setting

- ▶ M three-dimensional smooth manifold,
- ▶ D contact structure on M ,

Setting

- ▶ M three-dimensional smooth manifold,
- ▶ D contact structure on M , that is,
 $D = \ker \omega$ for one-form ω on M with $\omega \wedge d\omega \neq 0$,

Setting

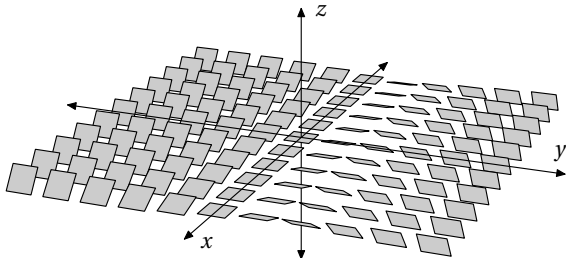

- ▶ M three-dimensional smooth manifold,
- ▶ D contact structure on M , that is,
 $D = \ker \omega$ for one-form ω on M with $\omega \wedge d\omega \neq 0$,
- ▶ g smooth fibre inner product on D ,

Setting

- ▶ M three-dimensional smooth manifold,
- ▶ D contact structure on M , that is,
 $D = \ker \omega$ for one-form ω on M with $\omega \wedge d\omega \neq 0$,
- ▶ g smooth fibre inner product on D ,
- ▶ (D, g) sub-Riemannian structure on M

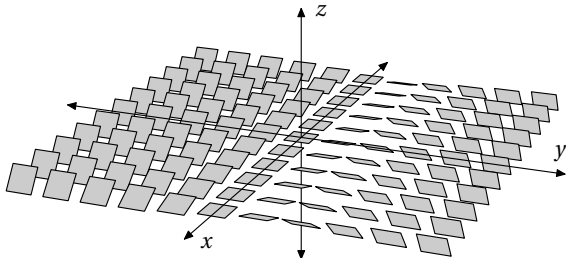

Setting

- ▶ M three-dimensional smooth manifold,
- ▶ D contact structure on M , that is,
 $D = \ker \omega$ for one-form ω on M with $\omega \wedge d\omega \neq 0$,
- ▶ g smooth fibre inner product on D ,
- ▶ (D, g) sub-Riemannian structure on M

Setting

- ▶ M three-dimensional smooth manifold,
- ▶ D contact structure on M , that is,
 $D = \ker \omega$ for one-form ω on M with $\omega \wedge d\omega \neq 0$,
- ▶ g smooth fibre inner product on D ,
- ▶ (D, g) sub-Riemannian structure on M ,
- ▶ S orientable surface embedded in M

Adjusted setting (for notational convenience)

- ▶ M three-dimensional smooth manifold,

Adjusted setting (for notational convenience)

- ▶ M three-dimensional smooth manifold,
- ▶ X_1 and X_2 two smooth vector fields on M such that $X_1, X_2, [X_1, X_2]$ are linearly independent everywhere,

Adjusted setting (for notational convenience)

- ▶ M three-dimensional smooth manifold,
- ▶ X_1 and X_2 two smooth vector fields on M such that $X_1, X_2, [X_1, X_2]$ are linearly independent everywhere,
 - ▶ D distribution spanned by X_1 and X_2 ,

Adjusted setting (for notational convenience)

- ▶ M three-dimensional smooth manifold,
- ▶ X_1 and X_2 two smooth vector fields on M such that $X_1, X_2, [X_1, X_2]$ are linearly independent everywhere,
 - ▶ D distribution spanned by X_1 and X_2 ,
 - ▶ g given by requiring (X_1, X_2) to be an orthonormal frame,

Adjusted setting (for notational convenience)

- ▶ M three-dimensional smooth manifold,
- ▶ X_1 and X_2 two smooth vector fields on M such that $X_1, X_2, [X_1, X_2]$ are linearly independent everywhere,
 - ▶ D distribution spanned by X_1 and X_2 ,
 - ▶ g given by requiring (X_1, X_2) to be an orthonormal frame,
- ▶ X_0 the unique vector field on M such that

$$[X_1, X_2] = X_0 + c_{12}^1 X_1 + c_{12}^2 X_2$$

Adjusted setting (for notational convenience)

- ▶ M three-dimensional smooth manifold,
- ▶ X_1 and X_2 two smooth vector fields on M such that $X_1, X_2, [X_1, X_2]$ are linearly independent everywhere,
 - ▶ D distribution spanned by X_1 and X_2 ,
 - ▶ g given by requiring (X_1, X_2) to be an orthonormal frame,
- ▶ X_0 the unique vector field on M such that

$$[X_1, X_2] = X_0 + c_{12}^1 X_1 + c_{12}^2 X_2$$

- ▶ X_0 the Reeb vector field for the contact form ω normalised such that $d\omega|_D = -\text{vol}_g$,

Adjusted setting (for notational convenience)

- ▶ M three-dimensional smooth manifold,
- ▶ X_1 and X_2 two smooth vector fields on M such that $X_1, X_2, [X_1, X_2]$ are linearly independent everywhere,
 - ▶ D distribution spanned by X_1 and X_2 ,

Theorem (Barilari, Boscain, Cannarsa, H)

For $f \in C_c^2(S \setminus \Gamma(S))$, we have

$$\Delta_\varepsilon f \rightarrow \Delta_0 f$$

uniformly on $S \setminus \Gamma(S)$ as $\varepsilon \rightarrow 0$.

Theorem (Barilari, Boscain, Cannarsa, H)

For $f \in C_c^2(S \setminus \Gamma(S))$, we have

$$\Delta_\varepsilon f \rightarrow \Delta_0 f$$

uniformly on $S \setminus \Gamma(S)$ as $\varepsilon \rightarrow 0$.

Theorem (Barilari, Boscain, Cannarsa, H)

For $f \in C_c^2(S \setminus \Gamma(S))$, we have

$$\Delta_\varepsilon f \rightarrow \Delta_0 f$$

uniformly on $S \setminus \Gamma(S)$ as $\varepsilon \rightarrow 0$.

The limiting operator is given by

$$\Delta_0 = \widehat{X}_S^2 + b\widehat{X}_S ,$$

Theorem (Barilari, Boscain, Cannarsa, H)

For $f \in C_c^2(S \setminus \Gamma(S))$, we have

$$\Delta_\varepsilon f \rightarrow \Delta_0 f$$

uniformly on $S \setminus \Gamma(S)$ as $\varepsilon \rightarrow 0$.

The limiting operator is given by

$$\Delta_0 = \widehat{X}_S^2 + b\widehat{X}_S ,$$

where

$$\widehat{X}_S = \frac{(X_2 u)X_1 - (X_1 u)X_2}{\sqrt{(X_1 u)^2 + (X_2 u)^2}}$$

Theorem (Barilari, Boscain, Cannarsa, H)

For $f \in C_c^2(S \setminus \Gamma(S))$, we have

$$\Delta_\varepsilon f \rightarrow \Delta_0 f$$

uniformly on $S \setminus \Gamma(S)$ as $\varepsilon \rightarrow 0$.

The limiting operator is given by

$$\Delta_0 = \widehat{X}_S^2 + b\widehat{X}_S ,$$

where

$$\widehat{X}_S = \frac{(X_2 u)X_1 - (X_1 u)X_2}{\sqrt{(X_1 u)^2 + (X_2 u)^2}} \quad \text{and} \quad b = \frac{X_0 u}{\sqrt{(X_1 u)^2 + (X_2 u)^2}} .$$

The limiting operator is given by

$$\Delta_0 = \widehat{X}_S^2 + b\widehat{X}_S ,$$

where

$$\widehat{X}_S = \frac{(X_2u)X_1 - (X_1u)X_2}{\sqrt{(X_1u)^2 + (X_2u)^2}} \quad \text{and} \quad b = \frac{X_0u}{\sqrt{(X_1u)^2 + (X_2u)^2}} .$$

The limiting operator is given by

$$\Delta_0 = \widehat{X}_S^2 + b\widehat{X}_S ,$$

where

$$\widehat{X}_S = \frac{(X_2u)X_1 - (X_1u)X_2}{\sqrt{(X_1u)^2 + (X_2u)^2}} \quad \text{and} \quad b = \frac{X_0u}{\sqrt{(X_1u)^2 + (X_2u)^2}} .$$

Proposition (Barilari, Boscain, Cannarsa, H)

Let K_ε be the Gaussian curvature of the Riemannian manifold (S, g_ε) . We have

$$K_0 := \lim_{\varepsilon \rightarrow 0} K_\varepsilon = -\widehat{X}_S(b) - b^2$$

uniformly on compact subsets of $S \setminus \Gamma(S)$.

The limiting operator is given by

$$\Delta_0 = \widehat{X}_S^2 + b\widehat{X}_S ,$$

where

$$\widehat{X}_S = \frac{(X_2u)X_1 - (X_1u)X_2}{\sqrt{(X_1u)^2 + (X_2u)^2}} \quad \text{and} \quad b = \frac{X_0u}{\sqrt{(X_1u)^2 + (X_2u)^2}} .$$

Proposition (Barilari, Boscain, Cannarsa, H)

Let K_ε be the Gaussian curvature of the Riemannian manifold (S, g_ε) . We have

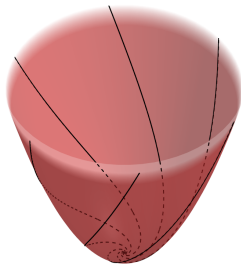

$$K_0 := \lim_{\varepsilon \rightarrow 0} K_\varepsilon = -\widehat{X}_S(b) - b^2$$

uniformly on compact subsets of $S \setminus \Gamma(S)$.

Notion of intrinsic Gaussian curvature K_0 for the surface S

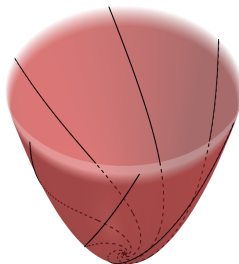

Example: Paraboloid $z = a(x^2 + y^2)$ in the Heisenberg group

Example: Paraboloid $z = a(x^2 + y^2)$ in the Heisenberg group

Characteristic foliation described by logarithmic spirals

Example: Paraboloid $z = a(x^2 + y^2)$ in the Heisenberg group

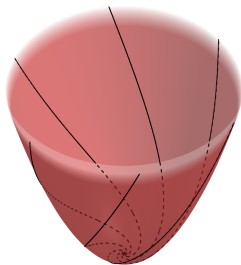

Characteristic foliation described by logarithmic spirals

In coordinates (s, ψ) with $s > 0$ and $\psi \in [0, 2\pi)$ on $S \setminus \Gamma(S)$

$$\widehat{X}_S = \frac{\partial}{\partial s} \quad \text{and} \quad b(s, \psi) = \frac{2}{s},$$

Example: Paraboloid $z = a(x^2 + y^2)$ in the Heisenberg group

Characteristic foliation described by logarithmic spirals

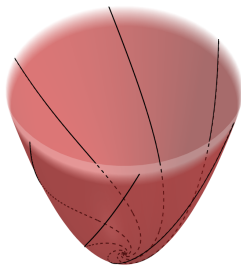

In coordinates (s, ψ) with $s > 0$ and $\psi \in [0, 2\pi)$ on $S \setminus \Gamma(S)$

$$\widehat{X}_S = \frac{\partial}{\partial s} \quad \text{and} \quad b(s, \psi) = \frac{2}{s},$$

so

$$\Delta_0 = \frac{\partial^2}{\partial s^2} + \frac{2}{s} \frac{\partial}{\partial s}.$$

Example: Paraboloid $z = a(x^2 + y^2)$ in the Heisenberg group

Characteristic foliation described by logarithmic spirals

In coordinates (s, ψ) with $s > 0$ and $\psi \in [0, 2\pi)$ on $S \setminus \Gamma(S)$

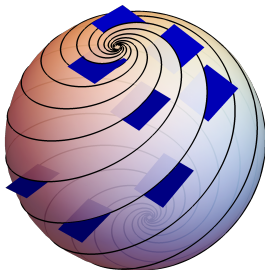

$$\widehat{X}_S = \frac{\partial}{\partial s} \quad \text{and} \quad b(s, \psi) = \frac{2}{s},$$

so

$$\frac{1}{2}\Delta_0 = \frac{1}{2}\frac{\partial^2}{\partial s^2} + \frac{1}{s}\frac{\partial}{\partial s}.$$

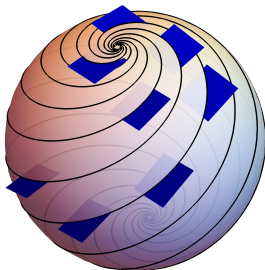

Example: Sphere $x^2 + y^2 + z^2 = a^2$ in the Heisenberg group

Example: Sphere $x^2 + y^2 + z^2 = a^2$ in the Heisenberg group

Characteristic foliation described by loxodromes

Example: Sphere $x^2 + y^2 + z^2 = a^2$ in the Heisenberg group

Characteristic foliation described by loxodromes

In coordinates (s, φ) on $S \setminus \Gamma(S)$

$$\frac{1}{2}\Delta_0 = \frac{1}{2} \frac{\partial^2}{\partial s^2} + \left(\cot(\theta(s)) \frac{d\theta}{ds} \right) \frac{\partial}{\partial s},$$

where $\varphi \in [0, 2\pi)$ and s is given in terms of the polar angle θ as a multiple of an elliptic integral of the second kind.

We can recover three classes of familiar stochastic processes.

We can recover three classes of familiar stochastic processes.

- ▶ Bessel process of order 3 has generator

$$\frac{1}{2} \frac{\partial^2}{\partial r^2} + \frac{1}{r} \frac{\partial}{\partial r} \quad \text{for } r > 0$$

We can recover three classes of familiar stochastic processes.

- ▶ Bessel process of order 3 has generator

$$\frac{1}{2} \frac{\partial^2}{\partial r^2} + \frac{1}{r} \frac{\partial}{\partial r} \quad \text{for } r > 0$$

- ▶ Legendre process of order 3 has generator

$$\frac{1}{2} \frac{\partial^2}{\partial \theta^2} + k \cot(k\theta) \frac{\partial}{\partial \theta} \quad \text{for } \theta \in \left(0, \frac{\pi}{k}\right)$$

We can recover three classes of familiar stochastic processes.

- ▶ Bessel process of order 3 has generator

$$\frac{1}{2} \frac{\partial^2}{\partial r^2} + \frac{1}{r} \frac{\partial}{\partial r} \quad \text{for } r > 0$$

- ▶ Legendre process of order 3 has generator

$$\frac{1}{2} \frac{\partial^2}{\partial \theta^2} + k \cot(k\theta) \frac{\partial}{\partial \theta} \quad \text{for } \theta \in \left(0, \frac{\pi}{k}\right)$$

- ▶ hyperbolic Bessel process of order 3 has generator

$$\frac{1}{2} \frac{\partial^2}{\partial r^2} + k \coth(kr) \frac{\partial}{\partial r} \quad \text{for } r > 0$$

Criterion for accessibility of characteristic points

Criterion for accessibility of characteristic points in terms of

$$\text{Hess } u = \begin{pmatrix} X_1 X_1 u & X_1 X_2 u \\ X_2 X_1 u & X_2 X_2 u \end{pmatrix}$$

Criterion for accessibility of characteristic points in terms of

$$\text{Hess } u = \begin{pmatrix} X_1 X_1 u & X_1 X_2 u \\ X_2 X_1 u & X_2 X_2 u \end{pmatrix}$$

Definition

Characteristic point $x \in \Gamma(S)$ is called

elliptic	if $\det((\text{Hess } u)(x)) > 0$,
hyperbolic	if $\det((\text{Hess } u)(x)) < 0$.

Criterion for accessibility of characteristic points in terms of

$$\text{Hess } u = \begin{pmatrix} X_1 X_1 u & X_1 X_2 u \\ X_2 X_1 u & X_2 X_2 u \end{pmatrix}$$

Definition

Characteristic point $x \in \Gamma(S)$ is called

elliptic	if $\det((\text{Hess } u)(x)) > 0$,
hyperbolic	if $\det((\text{Hess } u)(x)) < 0$.

Theorem (Barilari, Boscain, Cannarsa, H)

For the canonical stochastic process with generator $\frac{1}{2}\Delta_0$

- ▶ elliptic characteristic points are inaccessible, while
- ▶ hyperbolic characteristic points are accessible from the separatrices.

Definition

Characteristic point $x \in \Gamma(S)$ is called

elliptic if $\det((\text{Hess } u)(x)) > 0$,

hyperbolic if $\det((\text{Hess } u)(x)) < 0$.

Theorem (Barilari, Boscain, Cannarsa, H)

For the canonical stochastic process with generator $\frac{1}{2}\Delta_0$

- ▶ elliptic characteristic points are inaccessible, while
